

Eighty-one skills.

Four run the show.

TOKEN-OPTIMIZER
finds the cheapest path to the same answer, every time

SKILL THAT IMPROVES SKILLS
rewrites its own instructions after every task

RED-TEAM
attacks every result before it is believed

SELF-SCHEDULING LOOP
plans next week, checks the books and the research queue

HUMAN

AUTO-ADVANCE

HUMAN
THE FINAL SAY

> two-thirds fewer tokens

What survives goes to forward test: mock-live trading, code frozen at entry, judged only on what it does next.

The loop runs itself: lessons written back after every task, next week scheduled, books and the research queue checked.
